nutricentical applications, drug screening, clinical trial monitoring, diagnosing or treating diseases associated with biological disorders or imbalances.

The invention relates to novel human polypeptides (NHP) having kinase activity and polynucleotides encoding them. The polynucleotides, proteins and antagonists of the proteins are useful for drug screening, clinical trial monitoring, and diagnosing or treating diseases or disorders associated with biological disorders or imbalances. The proteins and polynucleotides are useful in commette and nurricentical applications, for identifying protein coding sequences and mapping a unique gene to a particular chromosome. The sequence of the polynucleotides and proteins can also be used as additional DNA markers for restriction fragment length polymorphism analysis, or in forensic biology. The present sequence represents a NHP kinase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                     9
New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        241 SADOPCVDVFYQALTYVQSNHRTNAPFTPRVLLLGPVGSGKSLQAALLAQKYRLVNVCCG

                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                               The present invention relates to novel human secretory or membrane proteins (ADAS40712-ADAS5710) and their coding sequences (ADAS4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         64. .71

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel human kinases and phosphatases (KPP) polypeptides and polynucleotides. Polypeptides of the invention are used for screening agonists and antagonists. They are used to make monoclonal or polyclonal or antibodies, which are used in diagnostic tests for conditions or diseases associated with expression of the polypeptide. They are also useful for diagnosing or treating diseases or conditions associated with decreased expression or overexpression of functional KPP e.g. cardiovascular or neurological disorders or cancer. The invention is useful in gene therapy. The present sequence is human KPP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VILGPPASGKTTIAMMLCKHLNSSLLTLENLILNEFSYTATEARRIYLQRKTVPSALLVQ 120

The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obssity, and endocrine. ONS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TVLIERNLGKRIDPQTGEIYHTTFDWPPESEIQNRLMVPEDISELETAQKLLEYHRNIVR 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                           The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The Novx polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    135

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAAI8642-AAA46213) with noctropic,
concoded polypeptides (AAAI8642-AAA46213) with noctropic,
immunosuppressant and cytostatic activity. The polynuclectides are useful
in gene therapy. A composition containing a polypeptide or polynuclectide
of the invention may be used to treat diseases of the peripheral nervous
system, such as peripheral nervous injuries, peripheral nervous
collised neuropathies and central nervous system diseases, such as
localised neuropathies and central nervous system diseases, such as
lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
utilisation of the activities such as: Immune system suppression,
and thrombolytic activity, chemoteractic/chemotinetic activity, hemoteratics
and thrombolytic activity, arthritis and inflammation, leukaemias and
collised assays for receptor activity, arthritis and inflammation, leukaemias and
collised assays for the sequence data for this patent did not form
collised assays for the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ě,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of FKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leukaemia, adenocarcinoma, lumphoma, melanoma, melanoma, malanoma, sarcoma, teratocarcinoma, Hodgkin's disease); immune disorder (Acquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, atherosclerosis, anaemia, allergies, adult respiratory distress syndrome, contoinmume thyroidities, gout, bronchitis, Crohn's disease, diabetes autoimmune thyroidities, gout, bronchitis, Crohn's disease, diabetes costeoarthritis, osteoporosis, Good pasture's syndrome, yentritis, syndrome, veritis, ulcerative colitis, osteoporosis, sondrome, uveitis, ulcerative colitis, bacterial, parasitic, fungal, viral, protozoal and helminthic infections (Cushing's syndrome, Hypothyroidism, cerebral palsy, cataracts); cardio caneurysms, congestive heart failure, angina pectoris, myocarditis, aneurysms, congestive heart failure, angina pectoris, myocarditis, cischaemic heart disease, chronic bronchitis, lung tumours); lipid cischaemia, obesity). PKIN DNA is useful for assessing toxicity or and a present sequence is human and a protosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel CC from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide for the polynucleotide, immunologically sasaying the polypeptide or peptide of the polynucleotide, immunologically sasaying the polypeptide or peptide of the polynucleotide, part of the polynucleotide of the polynucleotide of the polynucleotide in an expressible manner and an antistense polynucleotide. The oilgonucleotide of the two, a transformant carrying the polynucleotide in an expressible manner and an antistense polynucleotide. The oilgonucleotide is useful as a primer for synthesising the polynucleotide or as a probe of the two shoulded in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets or regulation of their expression and activity, or as targets or regulation. Fine generation of their expression and activity or expression or transcription-related proteins, signal transduction-related proteins, concoding them can be used as indicators for diseases (e.g. osteoporosis, the activity or expression of the encoded protein to treat diseases. The copy activity or expression of the invention neupplied by the finances presented is a protein of the invention. Note: Some of the sequence presented for this patent is not represented in the printed sequence presented or this patent is not represented in the printed sequence presented or this patent is not represented in the printed sequence presented or this patent is not represented in the printed or presented or this patent is not represented in the printed of the procession of the survey.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                  Human; 27802 protein; adenylate kinase; cellular proliferative disorder; neurological disorder; Inflammatory disorder; lymphatic disorder; cardiovascular disorder; inflammatory disorder; haematological disorder; cardiovascular disorder; perpiratory disorder; haematological disorder; crohn's disease; atherosclerosis; pernicious anaemia; asthma; leukaemia; acquired immune deficiency syndrome; NBS; multiple solerosis; lymphoma; Alzheimer's disease; systemic lupus erythematosus; SLB; gene therapy; lymphoblastic leukaemia; T-cell neoplasm; cytostatic; neuroprotective; tissue typing; antiarterioslerotic; chromosomal mapping; nootropic; dermatological; antiinflammatory; immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present amino acid sequence is human 27802 adenylate kinase. The 27802 protein and its corresponding nucleotide sequence is useful for modulating, disgnosing and treating cellular proliferative and/or differentiative, neurological, inflammatory, lymphatic, cardiovascular, immune, respiratory and haematological disorders. 27802 sequence is useful for treating immune disorders (e.g., Crohn's disease), disorders involving blood vessels (e.g., atherosclerosis), disorders involving red cells (e.g., pernicious anaemia), respiratory disorders (e.g., asthma), disorders involving prain and lymph nodes (e.g. acquired immune disorders sinvolving Facilis (e.g., multiple sclerosis, Alzheimer's disease), disorders involving T-cells (e.g., systemic lupus erythematosus),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "Human mature 27802 adenylate kinase"

diseases involving haematopoietic stem cells (e.g., leukaemia), disorders involving B-cells (e.g., lymphoblastic leukaemia/lymphoma) and disorders involving precursor T-cell neoplasms. 27802 sequence is useful for modulating cellular growth and/or cellular metabolic pathways, particularly for regulating one or more proteins involved in growth and metabolism. 27802 DNA is used in gene therapy. 27802 sequence or its antibody are useful in screening assays, detection assays (e.g., chromosomal mapping, tissue typing, forensic biology), preventive medicine (e.g., diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics) and in methods of treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                              240

human 32621, phospholipid scramblage-like molecules are useful for modulating immune, haematopoietic and blood clotting systems. They are useful for treating a disorder associated with abermant human phospholipid scramblage-like protein activity such as leukopaenia and systemic sclerosis. The human 27802 adenylate kinase are useful for modulating cellular growth and/or cellular metabolic pathways. They are

```
The present invention relates to novel proteins including ATPase-like proteins, phosphatidylserine synthase-like proteins, DNA fragmentation factorilike proteins phosphatidylserine synthase-like proteins or adenylate kinase proteins and polymuclectides encodiating such proteins. The human careful in modilating organelle biogenesis, cell-cycle regulation, protein degradation and vesicle-mediated transport. They are also useful for treating disorders associated with aberrant ATPase-like expression or treating disorders associated with aberrant ATPase-like molecules are useful for modulating the biosynthetic pathway involving the synthesis of useful for modulating the biosynthetic pathway involving the synthesis of the membrane phosphatidylserine (PS). They human phosphatidylserine synthase-like molecules are useful for treating disorders associated with aberrant human phosphatidylserine synthase activity such as the protein disease. The human 569s, DNA fragmentation factoring astrocytes and Hodgkin disease. The human 569s, DNA fragmentation factoring the molecules are useful for modulating apoptotic events, including DNA fragmentation. The human 569s molecules are useful for treating diseases and autoimmume disporders, neurodegenerative diseases and earcer. The form of the process of the proc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polypeptides including phosphatidylserine synthase-like polypeptide useful for identifying a compound which binds and modulates activity of the polypeptide useful for treating diseases, e.g. cancer.
                                                                                                                                                                                                                                                 206. .211

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM4213) with noctropic,

concoded polypeptides (AAM38642-AAM4213) with noctropic,

immunosuppressant and cytostatic activity. The polynuclectides are useful

in gene therapy. A composition containing a polypeptide or polynuclectide

of the invention may be used to treat diseases of the peripheral nervous

system, such as peripheral nervous injuries, peripheral nervous

contains and neuropathies and central nervous system diseases, such as

localised neuropathies and central nervous system disease, such as

caltaeiner's, Parkinson's disease, Huntington's disease, amyotrophic

lateral sclerosis, and Shy-Drager Syndrome. Other uses include the

utilisation of the activities such as: Immune system suppression,

activin/inhibin activity, chemoteactic/chemotanetic activity, hemoteactic/chemotanetic activity, hemoteactic/chemotanetic

and thrombolytic activity, ancer diagnosis and therapy, drug screening,

assays for receptor activity, arthritis and inflammation, leukaemias and

con a disorders. Note: The sequence data for this patent did not form

part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 VILGPPASGKTTIAMWLCKHLNSSLLTLENLILNEFSYTATEARRLYLORKTVPSALLVO 120

```
pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the polypeptide. Which involves contacting the polypeptide is also useful for identifying a binding partner and determining whether the binding partner ceffects an activity of the polypeptide. The polypeptide or the moleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administraing the polypeptide or the nucleic acid acid to a mammalian subject. The nucleic acid andionosing a pathological condition or a susceptibility to a pathological condition in a subject, which involves determining the presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or autopation or autopatical condition or autopation or an antibody to the polypeptide are useful for treating autolimmune disease, Parkinson's disease, allicosis, gastrointestinal disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents, as adjuvants to enhance immune responses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. The present sequence represents the amino acid sequence of a novel human concentration but was obtained in electronic format direct from cusper sequence of the sequence charaction but was obtained in electronic format direct from USPTO at sequence charaction the mino acid sequence of an aced the nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 PEDISELETAQKLLEYHRNIVRVIPSYPKILKVISADQPCVDVFYQALTYVQSNHRTNAP 120

```

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymedecides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system diagnosis and/or inflammation. Note: Records for SEQ ID NO 2110 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.

The invention relates to polynucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to production of cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hematopoises regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activitianian activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAKS2581), 2111 (AAKS2582) and 3666 (AAM8002D) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ţ
adenylate kinase (EC 2.7.4.3) - Bacillus subtilis
NiAlternate names: ATP-AMP transphosphorylase
C;Species: Bacillus subtilis
abcillus subtilis
C;Species: Date: 07-Sep-1990 #sequence revision 07-Sep-1990 #text_change 09-Jul-2004
C;Date: 07-Sep-1990 #sequence revision 07-Sep-1990 #text_change 09-Jul-2004
C;Accession: US0492; S12684; S08630; E69583

-I- FUNCTION: This small ubiquitous enzyme is essential for maintenance and cell growth. The maize enzyme also works with CMP,
-I- CMTALYTIC ACTIVITY: ATP + AMP = 2 ADP.
-I- CMTALYTIC ACTIVITY: ATP + AMP = 2 ADP.
-I- MASS SPECTROMETRY: WW=24867; METHOD=Electrospray; RANGE=1-222;
NOTHELLULAR LOCATION: Chloroplast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE-REF. Adenylate kinase (EC 2.7.4.3) (ATP-AMP transphosphorylase).
Name-adk; OrderedLocusNames=OB0140;
Occanobacillus iheyensis.
Bacteria: Firmicutes; Bacillales; Bacillaceae; Occanobacillus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic Acids Res. 30:3927-3935 (2002).

-!- FUNCTION: This small ubiquitous enzyme is essential for elementenance and cell growth.

maintenance and cell growth.

-!- CATALYTIC ACTIVITY: ATP + AMP = 2 ADP.

-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic kinase family.

-!- SIMILARITY: Belongs to the adenylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 221;
